# The Faster Way to Perfectly Crease & Fold Digitally Printed Cards

## **FoldStream**

Versatile and Modular Finishing Solution With Premium  
Trimming & Micro-Perforating Options...

# Introducing FoldStream

The FoldStream Creasing & Folding System Brings the Perfect Finishing Solution to the On Demand Digital Printer Who Specialises in Producing Multiple Batches of Short Run Greeting Cards of Various Weights & Sizes!

In today's **ultra-busy** working environment, the **ease of set up and fast turnaround** of digitally printed media in specialised areas is more critical than ever before. FoldStream quite simply enables you the luxury of delivering **high value, premium quality** finished greeting cards into the hands of your customer **faster than any competitive solution on the market!**

Of course, this **versatile** and **innovative** finishing solution is equally effective producing other products such as 4-page brochures, book covers, menus, flyers, order of service cards and much more!

Central touch-screen control unit includes a smart feed **stop & start batch counter** so exact quantities are processed.

Soft plough fold designed to gently close creased products, so they lay flat and damage-free.

## Fibre-Cracking and Card Curl Prevented in-one with FoldStream!

FoldStream is unique for 2 reasons...

### 1. It Eliminates Fibre-Cracking on Digitally Printed Cards Multiple Times Faster Than Traditional, Slow Performing Blade & Matrix Methods

The tooling shafts harness the highly acclaimed and globally successful **Tri-Creaser Advance**, the only rotary creasing solution that **prevents** toner & substrate **cracking!** The gentle 3 prong application works both the inside and outside of the crease to give cards that highly professional look!

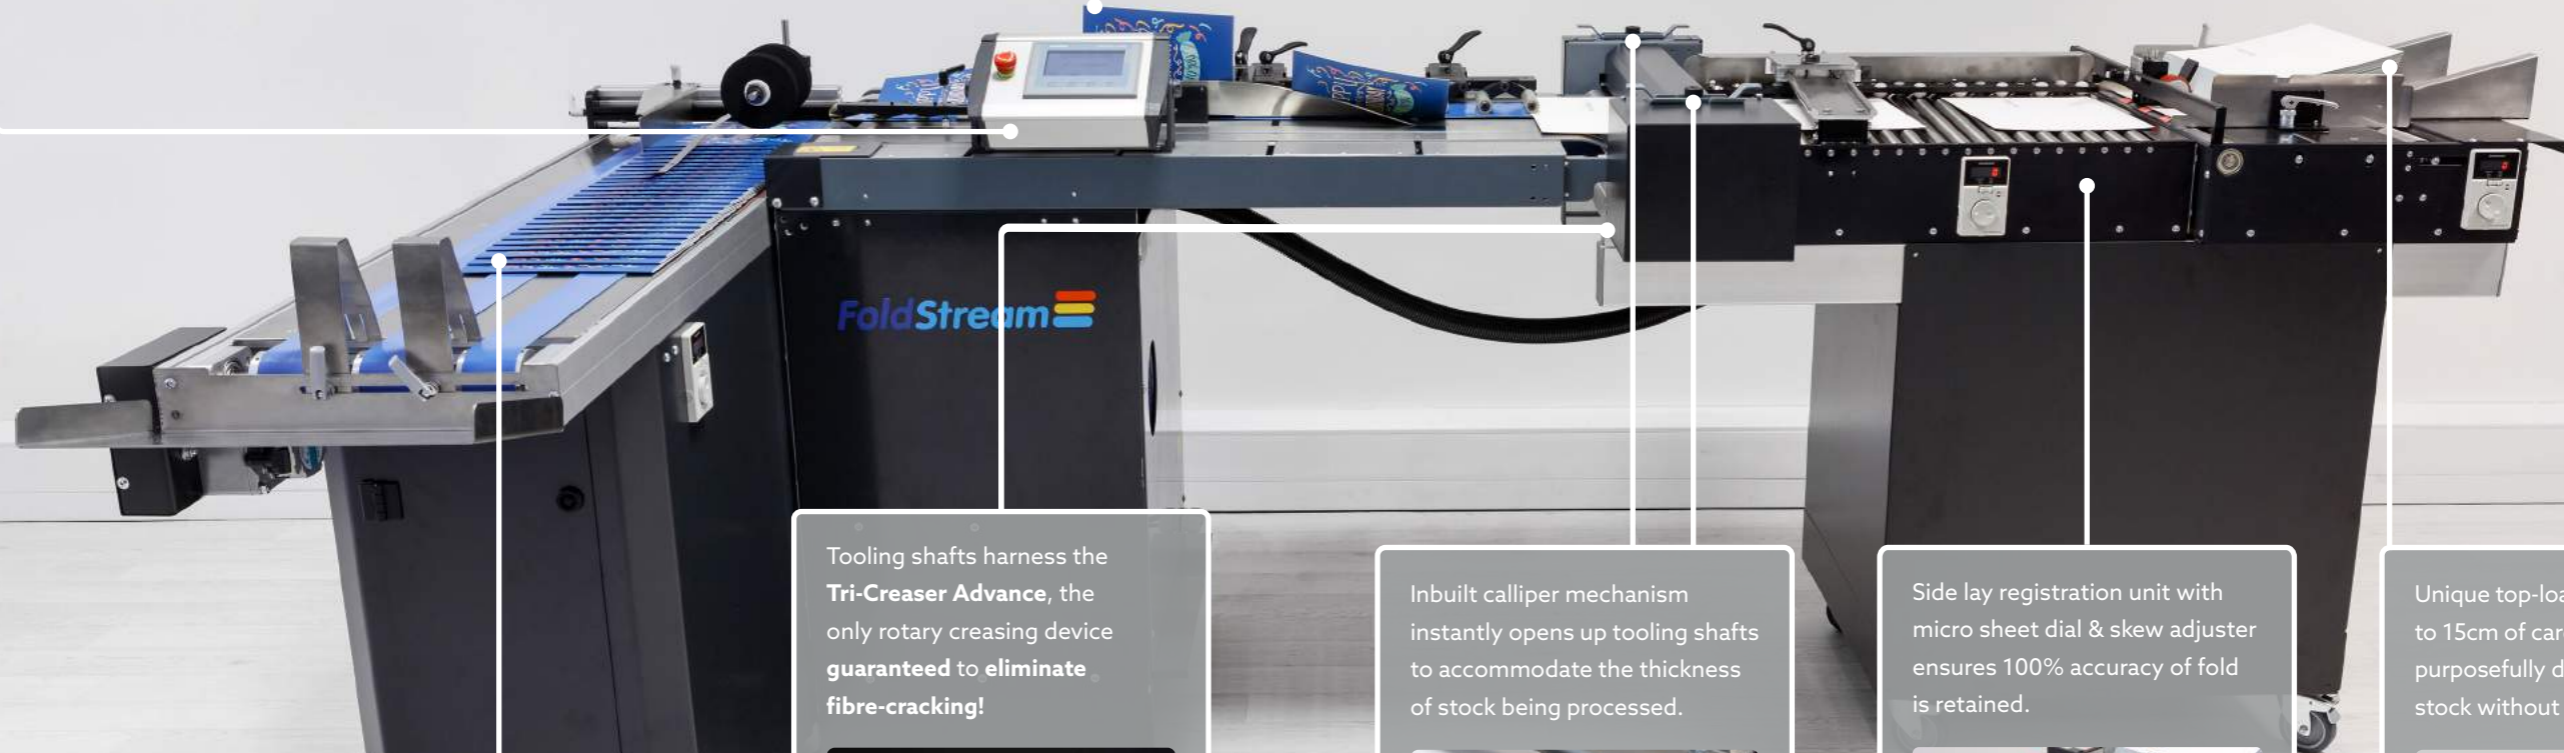

### 2. It Solves the Problem of Curled & Crushed Folds...

Most conventional methods of roller and buckle plate folding often combine to crush the spines of heavier materials and cause them to curl. Plough folding is soft and gentle, leaving the product lying **PERFECTLY** flat!

In short...

The benefits of fast rotary creasing and the soft plough fold application, more commonly used in the direct mail/packaging industry combine to give you the competitive edge, enabling dramatic **increases in bottom-line profit.**

Stream delivery with adjustable speed control, can be aligned at a right angle or parallel.

Tooling shafts harness the **Tri-Creaser Advance**, the only rotary creasing device **guaranteed to eliminate fibre-cracking!**

Inbuilt calliper mechanism instantly opens up tooling shafts to accommodate the thickness of stock being processed.

Side lay registration unit with micro sheet dial & skew adjuster ensures 100% accuracy of fold is retained.

Unique top-load feeder takes up to 15cm of card stock and was purposefully developed to feed stock without marking the toner.

# FOLDSTREAM LITE

Looking for a More Compact Crease & Fold System?  
Why Not Enquire After the FoldStream *Lite*?

## SAME FOLDSTREAM FEATURES INCLUDED:

- ✓ Toner-marking preventing feed technology
- ✓ High sheet stack and processing speed
- ✓ Fibre-crack eliminating, super-crease Tri-Creaser Advance technology
- ✓ Soft plough fold function for card curl prevention and more...

The Same Production Power, on a Smaller Scale!

Contact CreaseStream for more information on the FoldStream *Lite*.
